All mathematics is a mental construction performed by an idealized subject, subject to the following observations about knowledge:

All mathematics is a mental construction performed by an idealized subject, subject to the following observations about knowledge:

All mathematics is a mental construction performed by an idealized subject, subject to the following observations about knowledge:

1. experiences are never forgotten (monotonicity, functoriality)

All mathematics is a mental construction performed by an idealized subject, subject to the following observations about knowledge:

- 1. experiences are never forgotten (monotonicity, functoriality)
- 2. at a point in time, the subject knows whether or not it has experienced a judgment (decidability)

All mathematics is a mental construction performed by an idealized subject, subject to the following observations about knowledge:

- 1. experiences are never forgotten (monotonicity, functoriality)
- 2. at a point in time, the subject knows whether or not it has experienced a judgment (decidability)

Corollary

The meaning of a judgment \mathscr{J} must be explained in terms of its forcing condition, $w \Vdash \mathscr{J}$, for any stage/world w.

REMARK ON DECIDABILITY

•••

2. at a point in time, the subject knows whether or not it has experienced a judgment (decidability)

REMARK ON DECIDABILITY

•••

2. at a point in time, the subject knows whether or not it has experienced a judgment (decidability)

Remark

Contra Dummett, I <u>by no means</u> take the above as requiring that the following shall be true in a constructive metatheory, <u>divorced from time</u>:

$$\forall w. \forall \mathcal{J}. (w \Vdash \mathcal{J}) \lor \neg (w \Vdash \mathcal{J})$$
 (Dummett's infelicity)

The above is impossible in a Beth model.

where \mathscr{D}_{w} is the species of constructions that have been effected by stage \boldsymbol{w}

THE MEANING OF A PROPOSITION

The meaning of a proposition/type is an intensional (world-indexed) specification of verification acts, i.e. a local meaning explanation for $w \Vdash P \ verif$ (and its synthesis).

THE MEANING OF A PROPOSITION

The meaning of a proposition/type is an intensional (world-indexed) specification of verification acts, i.e. a local meaning explanation for $w \Vdash P \ verif$ (and its synthesis).

For a type A, implicit in the explanation of $w \Vdash A \ verif$ is a \mathbb{W} -indexed family of PERs $\mathscr{V}\llbracket A \rrbracket_w \subseteq \mathscr{D}_w \times \mathscr{D}_w$ whose members reflect the computational content (extension) of verification acts.

INTUITIONISTIC SEMANTICS OF TRUTH

Truth (justification) consists in recognizing the effectiveness of a procedure for verification.

INTUITIONISTIC SEMANTICS OF TRUTH

Truth (justification) consists in recognizing the effectiveness of a procedure for verification.

In the model, this corresponds to the inevitability of verification (i.e. a <u>bar</u>, in which verification occurs at all nodes):

 $w \Vdash A \ true \iff \exists \mathfrak{B} \ \mathbf{bars} \ w. \forall u \in \mathfrak{B}. \ u \Vdash A \ verif \quad \text{(due to Dummett)}$

The analytic judgments of type theory are reflections on mathematical activity.

1. Canonical membership reflects verification

$$\mathscr{V}[A]_w(M,N)\bowtie w\Vdash A\ verif$$

- 1. Canonical membership reflects verification
- 2. Membership reflects justification

$$w \Vdash M = N \in A \bowtie w \Vdash A true$$

- 1. Canonical membership reflects verification
- 2. Membership reflects justification
- 3. Computation reflects the recognition of a <u>bar</u>

$$w \Vdash M = N \in A \bowtie w \Vdash A true$$

- 1. Canonical membership reflects verification
- 2. Membership reflects justification
- 3. Computation reflects the recognition of a bar

$$\wedge \left\{ \begin{array}{l} w \Vdash M \Downarrow M' \\ w \Vdash N \Downarrow N' \\ \mathscr{V} \llbracket A \rrbracket_w (M', N') \end{array} \right\} \bowtie \exists \mathfrak{B} \text{ bars } w. \forall u \in \mathfrak{B}. \ u \Vdash A \ verif$$

a statement is intuitionistically true if it is forced at all nodes

a statement is intuitionistically true if it is forced at all nodes

a statement is intuitionistically true if it is forced at all nodes a statement is constructively true if it is forced at all nodes

a statement is intuitionistically true if it is forced at all nodes a statement is constructively true if it is forced at all nodes

Intuitionism subsumes constructivism, but goes much further by allowing the observation of non-constructive objects (Fourman)

CHOICE SEQUENCES AND THE CREATING SUBJECT

choice sequences (streams of objects) may be propounded over time based on the previous experience of the creating subject.

CHOICE SEQUENCES AND THE CREATING SUBJECT

choice sequences (streams of objects) may be propounded over time based on the previous experience of the creating subject.

Example:

$$\alpha(i) = \begin{cases} 0 & i \Vdash A \ true \\ 1 & \neg(i \Vdash A \ true) \end{cases}$$
 (KS)

THE JUSTIFICATIONS SHEAF

Let \mathscr{K}_A : **FinSet**^{Wop} be the sheaf of constructions of A true effected "so far" for each canonical proposition A.

THE JUSTIFICATIONS SHEAF

Let \mathcal{K}_A : **FinSet**^{Wop} be the sheaf of constructions of A true effected "so far" for each canonical proposition A.

We now can give a precise, but non-deterministic, dynamics to **require**:

THE JUSTIFICATIONS SHEAF

Let \mathcal{K}_A : **FinSet**^{Wop} be the sheaf of constructions of A true effected "so far" for each canonical proposition A.

We now can give a precise, but non-deterministic, dynamics to **require**:

$$\frac{w \Vdash A \Downarrow A' \quad M \in \mathcal{X}_{A'}(w) \quad w \Vdash [M/x] N \Downarrow N'}{w \Vdash \text{require } x : A \text{ in } N \Downarrow N'}$$
 (*)

ELIMINATING NON-DETERMINISM WITH A SPREAD

We need a way to deterministically choose a representative of $\mathcal{K}_A(w)$. First, let \varkappa_A be the choice sequence of lists given by enumerating $\mathcal{K}_A(w)$ at each stage w, in order of time.

ELIMINATING NON-DETERMINISM WITH A SPREAD

We need a way to deterministically choose a representative of $\mathcal{K}_A(w)$. First, let \varkappa_A be the choice sequence of lists given by enumerating $\mathcal{K}_A(w)$ at each stage w, in order of time.

Idea: reformulate Type Theory relative to a choice sequence of "choosers".

SPREADS: SETS OF CHOICE SEQUENCES

A spread direction \mathfrak{S} is a restriction on choice sequences which is defined by a condition on their finite approximations (prefixes, neighborhoods), subject to the following laws:

SPREADS: SETS OF CHOICE SEQUENCES

A spread direction \mathfrak{S} is a restriction on choice sequences which is defined by a condition on their finite approximations (prefixes, neighborhoods), subject to the following laws:

1. the empty neighborhood shall be admitted

SPREADS: SETS OF CHOICE SEQUENCES

A spread direction \mathfrak{S} is a restriction on choice sequences which is defined by a condition on their finite approximations (prefixes, neighborhoods), subject to the following laws:

1. the empty neighborhood shall be admitted

$$\mathfrak{S}(\langle \rangle)$$

2. if a neighborhood is admitted, so shall all its subneighborhoods

$$|_{\vec{u},m} \mathfrak{S}(\vec{u}) \left(\mathfrak{S}(\vec{u} - m) \right)$$

SPREADS: SETS OF CHOICE SEQUENCES

A spread direction \mathfrak{S} is a restriction on choice sequences which is defined by a condition on their finite approximations (prefixes, neighborhoods), subject to the following laws:

1. the empty neighborhood shall be admitted

$$\mathfrak{S}(\langle \rangle)$$

2. if a neighborhood is admitted, so shall all its subneighborhoods

$$|_{\vec{u},m} \mathfrak{S}(\vec{u}) \left(\mathfrak{S}(\vec{u} - m) \right)$$

3. a neighborhood may always be refined within the spread

$$|_{\vec{u}} \Im(\vec{u} - m) (\Im(\vec{u}))$$

A CONSERVATIVE EXTENSION OF TYPE THEORY

A spread direction for index-choosers:

$$\frac{\Xi(\vec{u}) \quad |_{n} \rho(n) < n \ (n \in \mathbb{N}^{+})}{\Xi(\vec{u} - \rho)}$$
 (spread law)

A CONSERVATIVE EXTENSION OF TYPE THEORY

A spread direction for index-choosers:

$$\frac{\Xi(\vec{u}) \quad |_{n} \rho(n) < n \ (n \in \mathbb{N}^{+})}{\Xi(\vec{u} - \rho)}$$
 (spread law)

Reformulate type theory relative to an arbitrary $\alpha \in \mathfrak{S}$! For instance:

$$\frac{w \Vdash M \Downarrow_{\alpha} M' \quad w \Vdash N \Downarrow_{\alpha} N' \quad \mathcal{V}[\![A]\!]_{w}^{\alpha}(M',N')}{w \Vdash M = N \in_{\alpha} A}$$

require — DYNAMICS

Deterministic choice for \varkappa_A :

$$\frac{w \Vdash A \Downarrow_{\alpha} A' \quad |\varkappa_{A'}(w)| = \ell \quad \operatorname{hd}(\alpha)(\ell) = i \quad \varkappa_{A'}(w)(i) = M}{w \Vdash \varkappa_{A} \ni_{\alpha} M}$$

require — DYNAMICS

Deterministic choice for \varkappa_A :

$$\frac{w \Vdash A \Downarrow_{\alpha} A' \quad |\varkappa_{A'}(w)| = \ell \quad \operatorname{hd}(\alpha)(\ell) = i \quad \varkappa_{A'}(w)(i) = M}{w \Vdash \varkappa_{A} \ni_{\alpha} M}$$

Deterministic dynamics for require:

$$\frac{w \Vdash \varkappa_{A} \ni_{\alpha} M \quad w \Vdash [M/x] N \Downarrow_{\mathsf{tl}(\alpha)} N'}{w \Vdash \mathsf{require} \ x : A \ \mathsf{in} \ N \Downarrow_{\alpha} N'} \qquad (\mathsf{for} \ \alpha \in \mathfrak{S})$$

VALIDITY OF THE REQUIRE RULE

Theorem

The following rule is valid in our semantics:

$$\frac{w \Vdash A \; true \quad w \Vdash x : A \vdash_{\alpha} N \in B}{w \Vdash \mathbf{require} \; x : A \; \mathbf{in} \; N \in_{\alpha} B} \; \; require$$

 $\frac{w \Vdash A \; true \quad w \Vdash x : A \vdash_{\alpha} N \in B}{w \Vdash \mathbf{require} \; x : A \; \mathbf{in} \; N \in_{\alpha} B} \; require$

 $\overline{w \Vdash \mathbf{require} \ x : A \mathbf{in} \ N \in_{\alpha} B}$ require

$$\frac{}{w\Vdash A\;true}\;\mathcal{D}\qquad \frac{}{w\Vdash x:A\vdash N\in B}\;\mathcal{E}$$

$$\frac{\overline{w \Vdash \mathbf{require} \ x : A \ \mathbf{in} \ N \Downarrow_{\alpha} \mathbf{N'}}}{w \Vdash \mathbf{require} \ x : A \ \mathbf{in} \ N \in_{\alpha} B} \ require}$$
 require

$$\frac{}{w \Vdash A \; true} \; \mathcal{D} \qquad \frac{}{w \Vdash x : A \vdash N \in B} \; \mathcal{E}$$

$$\frac{\overline{w} \Vdash \varkappa_{A} \ni_{\alpha} \overline{M} \quad \overline{[M/x]N \Downarrow_{\alpha} N'}}{\overline{w} \Vdash \mathbf{require} \ x : A \ \mathbf{in} \ N \Downarrow_{\alpha} N'} \quad \overline{\mathscr{V} \llbracket B \rrbracket_{w}^{\alpha} (N', N')}}{w \Vdash \mathbf{require} \ x : A \ \mathbf{in} \ N \in_{\alpha} B} \ require$$

$$\frac{}{w \Vdash A \; true} \; \mathcal{D} \qquad \frac{}{w \Vdash x : A \vdash N \in B} \; \mathcal{E}$$

$$\frac{\frac{\sqrt{}}{w \Vdash A \ true} \, \mathcal{D}}{\frac{w \Vdash \varkappa_{A} \ni_{\alpha} \, M}{w \Vdash \text{require } x : A \ \text{in } N \Downarrow_{\alpha} N'}} \frac{}{w \Vdash \text{require } x : A \ \text{in } N \Downarrow_{\alpha} N'} \frac{}{w \Vdash \text{require } x : A \ \text{in } N \in_{\alpha} B} \text{require}$$
